

Support element for an integrated blood treatment module,  
integrated blood treatment module and extracorporeal blood  
treatment apparatus equipped with said integrated module

ABSTRACT

5 The invention relates to support element (4) comprising a  
main body (6) having a front wall (25) and a peripheral wall  
(32) projecting away from the front wall. The front wall and  
the peripheral wall define a housing compartment (33) de-  
signed to receive a fluid distribution circuitry cooperating  
10 with a treatment unit for defining an integrated blood  
treatment module.
